

examination; cause the display to display the subset to a user of the ultrasound machine;  
receive a user-selected one of the subset of protocols; and  
execute the user-selected protocol, which activates the  
ultrasound machine to acquire an image and which visu- 5  
ally displays a prompt via a display screen that provides  
the step-by-step instructions to guide the user to acquire  
the one or more ultrasound images, wherein the prompt  
includes information regarding a particular transducer to  
apply and how to make a particular measurement, and a 10  
graphical representation graphically showing how to  
apply the particular transducer to acquire the one or  
more images.
